

DRY POWERTEX CLAY HAIRDRYER COLD, SEMI- OR WARM AIR

How To DRY **POWERTEX UNIVERSAL MEDIUM CLAY** WITH HAIR DRYER?

BEST IS TO LET POWERTEX UNIVERSAL MEDIUM CLAY DRY(CURE) TO AIR
DEPENDING ON THE THICKNESS OF THE CLAY LAYER

THIS MIGHT TAKE SEVERAL WEEKS,
ON TOP CONSIDERING THE BOTTOM LAYERS UNDERNEATH TOO

FOR OUTDOOR USE MAKE SURE YOU LET YOUR ARTWORK DRY/CURE MIN.
6 WEEKS IN A 20 DEGREES WARM AND NOT MOISTY ENVIRONMENT

YOU CAN ACCELERATE THE DRYING PROCESS WITH HAIRDRYER
ADVICE IS TO DO THIS WITH COLD OR SEMI-WARM AIR
IF AIR IS TOO HOT, AND THE MORE HELD TOO CLOSE TO CLAY,
A PLASTIFIED SKIN WILL OCCUR
AND THE INNER DRYING PROCESS WILL TAKE LONGER

ALSO THE CLAY MIGHT GET TOO SOFT AND DEFORM THE SCULPTING

CONSIDER POWERTEX UNIVERSAL MEDIUM CLAY
WILL ALWAYS HAS A SHRINKAGE PERCENTAGE
