

POWERTEX UNIVERSAL MEDIUM

dry & cure time ?

on the internet and in courses,
many different DRY- & CURE times are mentioned.

WHAT IS RIGHT ?

Well that really fully depends on several factors, actually
the techniques used
the materials used
the number of layer(s) applied and it's thickness(es)
temperature & humidity of the drying environment

As a minimum it is recommended to let thoroughly dry
= let harden your artwork minimum 6 weeks in a room
with on average a constant temperature of 18 degrees,
and this definitely if it is meant for outdoor exposure.

Use your common sence to consider a longer dry
= cure time if the above factors
are considerably out of the 'normal' order.
